

NATO SEASPARROW Consortium

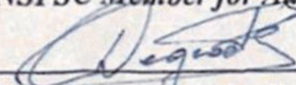

Excellence Award

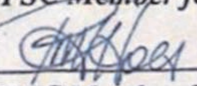

Presented to

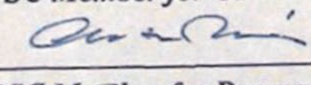

Canadian Maritime Engineering

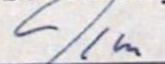

The NATO SEASPARROW Project Steering Committee hereby awards this certificate in recognition of your outstanding contributions as a member of the MK 48 ESSM ORDALT Team. The MK 48 ESSM ORDALT Team was responsible for the design, development, production and deployment of ORDALT Kits to modify MK 48 GMVLS hardware and software to vertically launch the ESSM. This program, which started in 1995, culminated in the successful launch of two ESSMs from HMCS ST. JOHN'S in November 2004. Although the MK 48 ESSM ORDALT Team encountered many obstacles, their most noteworthy accomplishment involved the swift identification and resolution of the anomalies discovered during the initial risk reduction firings conducted by the Canadian Forces. For exhibiting the spirit of cooperation, teamwork and commitment that have been the trademark of this Consortium, the NATO SEASPARROW Project Steering Committee presents this certificate as a lasting reminder of our gratitude to the MK 48 ESSM ORDALT Team.
